PROFESSIONAL SUMMARY

Data Analyst with hands-on experience turning internal and external datasets into data-driven insights through SQL, Python, Tableau, and Excel. Built analytics projects focused on customer behavior, used car pricing, and video game sales performance analysis, applying data modeling, reporting, and market intelligence techniques to support strategic planning and business decision-making. Comfortable maintaining clean datasets, developing dashboards, and presenting findings that can support business units, corporate strategy support, and senior management reporting.

EDUCATION

Tribhuvan University

Bachelor of Business Studies, Business Studies

SKILLS

Programming Languages: Python, SQL

Frameworks & Libraries: Pandas, NumPy, Matplotlib, Seaborn

Tools & Software: Tableau, Excel, Git, GitHub, VS Code, Jupyter Notebook, Dashboard Reporting, Data Cleaning, Data Visualization, Dataset Maintenance, Research, Market Analysis

Soft Skills: Analytical Thinking, Problem Solving, Communication, Attention to Detail, Continuous Learning

Spoken Languages: English, Nepali, Hindi

PROJECTS

E-Commerce Customer Behavior Analysis

- Analyzed internal and external datasets from e-commerce transactions and customer activity to generate data-driven insights on purchasing behavior, retention patterns, and growth opportunities.
- Performed data modeling and dataset maintenance in Python and SQL by cleaning, joining, and structuring customer, product, and order data for repeatable reporting and analytics projects.
- Built Tableau and Excel reporting dashboards to track sales performance analysis, product trends, and customer segments, supporting strategic planning and business unit support decisions.

Used Car Sales Analysis

- Evaluated used car listing data and market pricing trends using Python, SQL, and Excel to deliver market intelligence on vehicle demand, price positioning, and regional opportunities.
- Conducted operations analysis and capital allocation analysis by comparing inventory mix, pricing patterns, and sales velocity across categories to identify higher-value opportunities.
- Created reporting outputs and visualizations that summarized internal datasets and external datasets for stakeholder review, strengthening analytics projects and senior management reporting readiness.

Video Game Sales Analysis

- Analyzed video game sales data across platforms, genres, and regions to uncover data-driven insights tied to market intelligence, revenue patterns, and consumer demand shifts.
- Used data modeling techniques in Pandas, NumPy, and SQL to prepare structured datasets for reporting, sales performance analysis, and trend forecasting.
- Developed dashboards and presentation-ready summaries in Tableau and Excel to support strategic planning, corporate strategy support, and cross-functional business unit support discussions.

CERTIFICATIONS & ACHIEVEMENTS

- Data Analysis
- SQL
- Tableau
